
main()
Input image filename
Load image using load_img()
Convert to grayscale using rgb_to_grayscale
gaussian_filter()
sobel_filter()
Display and save the image
End program

sobel_filter()
Takes a blurred grayscale image
Initialize Sobel_x and sobel_y kernels
Convert image and kernels to floats
Pad the image with zeros
Compute x and y gradient
Combine the images
Apply a threshold of 50 to each pixel
return result
